Institutional Development

Description

The overall objective of this technical assistance is to design and implement a program of capacity building and road safety programs in selected central provinces. More specifically the TA will

- assist the Provincial Department of Transport (PDOT) to introduce more effective road maintenance management planning procedures and prepare integrated road network plans in 10 provinces covering all classes of road
- assist the PDOTs to implement effective road maintenance management systems in 10 provinces
- assist the PDOTs in three provinces to introduce procedures developed by the Road Safety Project for application on provincial roads
- carry out a detailed training needs assessment and organize a training program for PDOT staff in 10 provinces in technical activities required to support the implemen-

tation of planning, maintenance and road safety programs

- assist the PDOTs in identifying and procuring suitable equipment to support the institutional development programs.

Services provided by Grontmij | Carl Bro

The scope of the work is to:

- adapt training materials and operation manuals for the planning and maintenance systems.
- develop list of equipment to support the TA
- establish links with the WB Road Safety Project
- organise and conduct provincial safety workshop
- develop a work program and schedule for providing the road safety TA over a two-year period.
- develop a road safety audit system and provide training to the PDOTs in road safety audit procedures.
